

1. What is a literature review?

Product: The final written draft or document that synthesizes existing research.

Process: The steps involved in searching, evaluating, and organizing the literature.

2. What are the purposes of the literature review?

- (1) It provides the historical background for your research.
- (2) It situates your research within current debates, issues, and questions in the field.
- (3) It discusses the key theories and concepts that underpin your research.
- (4) It introduces relevant terminology and clarifies how terms are used in your study.
- (5) It reviews related research and shows how your work extends, challenges, or fills a gap in the field.
- (6) It provides evidence for the problem your research addresses, thereby underlining its significance.

3. Template: The multiple purposes of your own literature review

Research topic

RQs

Purposes of the lit review

Relevant points to include in relation to your research topic

Important references

Historical background

Contemporary context

Theories and concepts

Relevant terminology

Previous research and its limitations

(the gap, the challenge, the extension)

The significance of the issue being researched

Other

4. What are the differences between empirical articles and review articles?

<i>Empirical</i> 實證	<i>Review</i>
[1] report original research based on observed and measured data	[1] summarize and synthesize existing research on a topic
[2] based on actual experiments, surveys, or observations	[2] no new data or experiments presented
[3] aim to generate new findings 產出一個新的發現or 結果	[3] aim to provide an overview of the field
[4] include sections such as Introductions, Methods, Results, and Discussion IMRD 標準架構	[4] focus on analysis, comparison, and evaluation of studies

5. An example of a review article

Reference	Hsieh, S.-R., Chang, S.-I., & Cheng, S.-H. (2024). FinTech governance challenges and solutions: A critical review and research agenda. <i>Pacific Asia Journal of the Association for Information Systems</i> , 16(3), 64–90. 可以根據題目去看
Introduction 	Move 1: 限縮(def定義的部分來給自己定義用自己的方式去詮釋它，要設定框架 假設人工智慧可以先介紹，在框一個框架) Definition: “Financial technology, commonly referred to as FinTech, can be conceptualized as...” Background: “The emergence of FinTech has... revolutionized...” Importance: “As FinTech reduces..., it is recognized as a catalyst of financial inclusion...” Move 2: (金融科技常常會碰見的問題議題；提1-2會遇見的困境 負面的效益效應；最後提到自己要討論的議題，盡量有連貫性) Issue 1: “However, given that FinTech related activities remain a new realm...” 後面會再提到很需要做得方向 Issue 2: “Apart from regulatory issue, current practices and models also require reexamination...” Gap: “However, recent academic work tends to treat challenges and solutions of FinTech separately...” Move 3: 說明這篇的目標、找出可能得威脅；這邊會帶出你的RQ Purpose: “Therefore, this study intends to review...” RQs: (1) What are the issues and challenges of FinTech governance? (2) What are the solutions of FinTech governance? (3) What are the future research avenues in the field of FinTech governance?

Lit Review extension of Move 1	● Evolution ● Innovation ● Ecosystem 訂了甚麼標題。	5 phases: 1.0 → 2.0 → 3.0 → 3.5 → 4.0 (AI, big data, and blockchain) 7 categories: cybersecurity, mobile transactions, data analytics, blockchain, P2P, robo-advising, and IoT 5 actors: FinTech startups, technology developers, government organizations, financial customers, and traditional financial institutions
extension of Move 2	要確定是否有回應到 <需要去確認> ● Challenges for 5 FinTech Actors 不同的角色要有不同的說明	1. FinTech startups & traditional financial institutions face 6 categories of issues and challenges. 2. IT/IS developers & consumers face distinct challenges—developers must cope with rapid technological change, while consumers are concerned with system quality, security, and trust. 3. Governments and regulators face the challenge of balancing innovation and risk control in a fast-evolving FinTech landscape, while also managing cross-border regulations, legal complexities, and emerging issues like cybersecurity and data privacy.
extension of move 3	● Theoretical governance frameworks 要談框架	1. Governance → corporate governance → IT governance 2. Though effective IT governance is essential in FinTech, research remains limited, leading firms to rely on existing frameworks like COSO and COBIT. 3. The gap in current governance frameworks highlights the necessity of developing a comprehensive taxonomy to address these new challenges and guide the industry in mitigating risks. 強化自己研究的必要性，前面的目標要去做分類
Methodology & Design	What are the differences between systematic literature review (SLR) and traditional literature review?	
	SLR traditional lit review	
	[1] answer a specific, well-defined RQ	[1] provide an overview or discussion of a topic
	[2] structured, predefined protocol	[2] flexible and narrative-based
	[3] comprehensive and systematic (see Figure 1 PRISMA) (databases, keywords, time range) 專屬SOP	[3] selective, based on author’s judgment
	[4] replicable	[4] low transparency in selection process
	[5] strict inclusion and exclusion criteria	[5] no strict criteria; subjective selection
	[6] extracts and synthesizes data systematically	[6] summarizes and interprets literature freely

Findings <i>Answers to RQ1</i> ↓ <i>Answers to RQ2</i> ↓ <i>(Answers to RQ3)</i>	Challenges	● 7 categories
	Solutions	● 7 categories
	Future research avenues	
Discussion, Implications, and Future Directions <i>Overall summary</i> ↓ <i>Discussion of RQ1</i> ↓ <i>Discussion of RQ2</i> ↓ <i>(Discussion of RQ3)</i> ↓ <i>Implications</i>		● Summary and highlights of introduction, literature review, and methodology + lessons learned
		● Summary and highlights of RQ1 and RQ2 and contributions of the study + lessons learned
		● Implications for theory and practice (suggestions for the academic circle and the practitioners)
		● Limitations (no perfect research) 這是一定會有的, 不可或缺
		● Future directions: 4 Agendas
Conclusion		● Recap of the entire study

Note: The analysis and moves presented in this literature review example may vary slightly across different fields due to the writing conventions of each discipline.
